PROJECTS

Mobile application for gender-based violence reporting and support

09/2023 – 11/2023

- Designed and Developed gender-based violence application for Android using Java and Android Studio.
- Implemented features for awareness, communication platform, GPS (Global Positioning System), and get help platform.
- Utilized Firebase for data storage and retrieval.

Hall Booking Application

01/2023 – 05/2023

- Designed and Developed hall booking application for cross-platform using Angular and Typescript in Ionic framework.

- Implemented features for authentication, view available and book hall, edit booking or cancel.
- Utilized Firebase for data storage and retrieval.

Employee System Management

01/2021 – 05/2021

- Developed a comprehensive employee system management using Bash to manage regular employees critical data.
- Implemented error handling to ensure the integrity of employees processes.

Hospital Web Application

08/2019 – 11/2019

- Developed using HTML, CSS for front-end.
- For back-end PHP was used.
- Utilized MySQL for efficient data storage and retrieval.

School Management System

01/2019 – 06/2019

- This project was developed using C++ it was to help teachers to record every information about students

PROFESSIONAL EXPERIENCE

Information Technology Intern | People's SACCOS

06/2022 – 12/2022

- Design (using Figma) mobile application for the cooperative.
- Developed application for Android using Java and Android Studio.
- Utilized Firebase for data storage and retrieval.

Maseru, Lesotho

Trained and worked around People's SACCOS System which is Platform for cloud-based banking (Mambu system)

PUBLICATIONS

A mobile application for gender-based violence reporting and victims support in Lesotho

This was my Research Thesis at Botho University on final project when completing Bachelor of Science (Honours) in Mobile Computing
